

# MAI\_ISHA

FASHION & BEAUTY SPHERE

## Website Proposal & Quotation

Prepared for Aishat Isha, Founder — MAI\_ISHA

Prepared by Lanre Sanni

14 September 2026

# 1. Project Summary

---

This proposal covers the design and build of a full e-commerce website/web app for MAI\_ISHA Fashion & Beauty Sphere — a platform where customers can browse products, add items to a cart, and place orders directly online, with secure payments, order tracking, stock management, discount codes, and an admin dashboard for you to manage everything.

The site will be designed to feel polished and premium, in your brand colours of **black and gold**, with your product categories clearly organised for easy browsing.

# 2. Scope of Work

---

## Customer-facing storefront

- Product browsing by category, with search, filtering and sorting
- Shopping cart and secure checkout
- Customer accounts, with order history and saved addresses
- Order tracking, with status updates by **email and SMS**
- Discount code redemption at checkout
- Automatic UK VAT calculation at checkout
- Fully responsive — works on mobile, tablet and desktop

## Product categories (launch)

- |                                   |                   |               |
|-----------------------------------|-------------------|---------------|
| ◆ Hair extensions & hair products | ◆ Women's fashion | ◆ Activewear  |
| ◆ Islamic / modest wear           | ◆ Beauty products | ◆ Accessories |
| ◆ Men's wear                      | ◆ Baby's wear     | ◆ Shoes       |

## Admin dashboard (for you)

- Add, edit and organise products and categories
- Manage stock levels, with low-stock visibility
- View and update customer orders
- Create and manage discount codes
- Basic sales overview

## Payments & delivery

- Secure, PCI DSS-compliant payment processing — card payments, Apple Pay and Google Pay at launch; PayPal and Klarna can be added later
- Shipping set up to work with multiple couriers — **Royal Mail, DPD, Evri and DHL** — from one system

## Built for growth

Although launch is priced and built for the UK (GBP, UK VAT, UK couriers), the platform will be architected so additional currencies and international delivery can be switched on later without a rebuild.

## Technology & security

- Built on a proven, modern web stack (Laravel + Next.js) for speed and reliability
- Hosted on a dedicated cloud server, with free automatic HTTPS on your domain

- Your database is kept private (never exposed to the public internet) and backed up automatically every day to separate secure storage, so your data stays safe even if the server itself has an issue

### 3. Investment

| Item                        | Details                                                                                                                                                                                                                                                                            | Cost                |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| Website / web app build     | Full e-commerce platform as scoped in §2, including UI/UX design in your brand colours                                                                                                                                                                                             | <b>₦1,000,000</b>   |
| Hosting & domain setup      | No developer fee. You connect your own card directly with the hosting/domain provider so subsequent recurring bills are billed straight to you — no markup added. Indicative server cost is <b>~\$12–18/month</b> (billed by the provider), plus a small backup storage allowance. | <b>£0 (dev fee)</b> |
| DevOps / technical setup    | Waived for this project                                                                                                                                                                                                                                                            | <b>£0</b>           |
| Payment gateway integration | Included in the build. Standard per-transaction processing fees are charged by the payment provider directly (not by the developer) once the store is live.                                                                                                                        | <b>Included</b>     |
| Post-launch maintenance     | First 3 months after launch included at no charge. After that, maintenance is billed only if/when needed — the platform is built to require minimal ongoing intervention.                                                                                                          | <b>Free (3 mo.)</b> |

**TOTAL BUILD FEE**

**₦1,000,000**

Recurring costs such as hosting, domain renewal, and payment-processing transaction fees are billed directly to you by those providers and are separate from the build fee above — this keeps things transparent, with no third-party markup from the developer. The payment schedule for the build fee (60% on kick-off, 40% on delivery) is set out in the accompanying Statement of Work.

### 4. Timeline

Kick-off targeted for the weekend of **19–21 September 2026**, pending sign-off on this proposal. A detailed milestone schedule is provided in the Statement of Work.

### 5. Next Steps

- Confirm this proposal and the payment schedule in the Statement of Work
- Share any existing logo files (brand colours already confirmed: black & gold)
- Confirm preferred payment processor and shipping platform (recommendations provided separately), or approve the developer's recommendation
- Begin providing product content (photos, descriptions, pricing, stock counts) for the initial catalogue
